Historical Exhibit

The MTT-S Historical Exhibit will be open Tuesday through Thursday during the regular exhibition hours in the Exhibition Hall. The Historical Exhibit this year will include parts and photographs of the SCR 270 radar that detected Japanese warplanes on 7 December 1941. The MTT-S is fortunate to have Dr. Seymour Cohn contribute his laboratory notes that will be part of the exhibit. Also on display will be a collection of past IMS digests to commemorate the 50 years of this Symposium.

The Historical Electronics Museum is the permanent home of the MTT-S Historical Collection between Symposia. The Museum holds many microwave-related items besides the MTT-S collection, including a complete SCR-584 radar that was used with a proximity fuze in World War II. It also contains an impressive library of over 10,000 books and 11,000 journals. The Museum is located near Baltimore-Washington International Airport and is approximately 20 minutes from Baltimore. Additional information on the Museum can be found at www.hem-usa.org, or call 1-410-765-2345.

Model of the SCR-270 Radar located at Opana Point, Oahu, that detected the Pearl Harbor attacking planes 55 minutes prior to the attack on 7 December 1941.

MicroApps

The Microwave Application Seminars (MicroApps), inaugurated in 1996, serves as a forum for IMS exhibitors to present the technology behind their commercial products and their special capabilities. The presentations are 20 minutes in length and are open to all conference and exhibit attendees. Everyone who attends

MicroApps will receive a free CD-ROM that includes informative details from every presentation. The MicroApps presentation room is located along the right-side wall when entering the Exhibition Hall, adjacent to the MTT-S Historical Exhibit.
